

Cloud Infrastructure Migration Proposal

Executive Summary

CloudFirst Consulting proposes a phased migration of FinanceCore Ltd's on-premises infrastructure to Microsoft Azure, reducing infrastructure costs by 35% while improving uptime SLA from 99.5% to 99.99%.

Current State Assessment

FinanceCore operates 47 physical servers across 2 data centres. Infrastructure is 8 years old, nearing end-of-life. Annual maintenance cost: \$380,000. Recent incidents: 3 unplanned outages in 12 months averaging 4.2 hours each.

Proposed Architecture

Migration to Azure with: Azure Kubernetes Service (AKS) for application hosting, Azure SQL Managed Instance for databases, Azure Blob Storage for files, Azure Active Directory for identity, ExpressRoute for hybrid connectivity.

Migration Approach

- Phase 1: Non-critical workloads (dev/test environments) - 4 weeks
- Phase 2: Business applications (CRM, HR systems) - 8 weeks
- Phase 3: Core financial systems with parallel run - 12 weeks
- Phase 4: Data centre decommission - 4 weeks

Risk Mitigation

All migrations include: parallel running period (2 weeks minimum), automated rollback procedures, comprehensive testing gates, 24/7 support during cutover windows, cyber insurance coverage.

Cost Analysis

- Migration Project Cost: \$95,000
- Annual Azure Infrastructure: \$248,000
- Annual Savings vs Current: \$132,000
- Payback Period: 8.7 months
- 5-Year NPV Savings: \$565,000

Compliance & Security

Azure deployments will maintain: ISO 27001, SOC 2 Type II, PCI DSS Level 1, GDPR compliance. All data encrypted at rest (AES-256) and in transit (TLS 1.3). Weekly penetration testing and continuous vulnerability scanning.

Support & Governance

Post-migration: 24/7 NOC monitoring, monthly optimisation reviews, quarterly business reviews, FinOps dashboard for cost visibility, Azure Advisor recommendations implemented monthly.
